

- Aim: Creation of stored procedures, execution and modification of procedures.
- Queries: using the employee database of lab 2.

→ creating procedure

// delimiter

create procedure get_emp_info (IN s int)

begin

select fname, lname, sex, salary from
employee

where s > salary > s;

end //

→ Execution:

call get_emp_info (30000);

→ Modification:

delimiter //

alter procedure get_emp_info (IN s int, IN gender
CHAR(1))

begin

select fname, lname, sex, salary from employee
where salary > s and sex = gender

end //

get - emp - info (30000).

Fname	Lname	Sex	Salary.
Franklin	Wong	M	40,000
Ramesh	Narayan	M	38,000
James	Borg	M	55,000
Jennifer.	Wallace	F	43,000.

Modified table.

Fname	Lname	Sex	Salary.
Jennifer	Wallace	F	43,000.
